

***PAIN* OFF** Traffic Paint Remover

Description :

PAINT OFF is the latest innovation in road / highway paint removal, formulated to incorporate new environmentally-friendly plant based solvent chemistry to quickly and easily remove traffic paint without damaging the surfaces of your vehicle.

Nowadays, road line paints are water based; their resins, once cured, are very resistant to traditional paint thinner. To remove them, it takes a product specifically designed for this purpose, which acts on the acrylic resin by diluting it. PAINT OFF works on clear coat finishes, well-maintained painted surfaces, plastics, chrome, and rubber.

Advantages :

- Removes dried road line paint from vehicle surfaces.
- Works on paint, plastics and rubber, glass.
- Natural solvent, pleasant smell of orange.
- Less damaging to finishes than traditional paint thinners.

Instructions :

DO NOT RUB harshly the road paint as it contains glass and can scratch your paint surface.

SPECIAL NOTE: Do not use on newly applied clear coat finishes or conventional non-catalysed paint finishes. Before using on rubber, any plastic or vinyl surfaces make a test in an inconspicuous area, to ensure that surface is not attacked along with road paint.

- Use gloves to protect hands from paint residue.
- Spray over the contamination to saturate the surface.
- Let it stand for about 2-3 minutes to soften the paint.
- Use a soaked cloth and lightly scrub in a circular motion to begin dissolving paint.
- Wipe up any remaining residue with a clean cloth. Repeat if necessary.
